EDUCATION

BMS College of Engineering

Bachelor of Engineering in Information Science Engineering

Bangalore, India

Aug 2017 – May 2021

EXPERIENCE

Member of Technical Staff 2

December 2024 – Present

Cohesity

Bangalore, India

- Led the design & development of a cluster-wide GFlags intelligence platform using Python + AWS SSM to extract and analyze non-default gflags across CCS clusters, eliminating manual SSH-based audits. Layered Azure-hosted AI agents and n8n workflows to detect daily config drift patterns proactively and drove a structured engineering review that reduced 90% high disk space utilization alerts and simplified cluster configurations across the fleet.
- Architected and delivered an OpsConsole-native vertical and horizontal scaling capability (FastAPI, MongoDB, Temporal durable workflows, Angular UI) for sequential, per-instance EC2 type changes under approval-gated flows, replacing ad-hoc AWS Console resizing with auditable request/history data and blast-radius-limited execution; configured Temporal retry policies and failure isolation per instance; integrated with STS/IAM dataplane access and OpenTelemetry-instrumented OpsConsole APIs.
- Designed and developed an n8n-based DMAAS disk-space triage agent that automates Jira, Prometheus, and cluster diagnostics to identify disk consumers and recommend cleanup, GFlag tuning, scaling, or escalation eliminating manual cluster investigation for on-call engineers.
- Shipped Fleet Operations capabilities on OpsConsole: durable workflows (Temporal), fleet-wide remote execution (AWS SSM), and operational state in MongoDB, exposed through REST APIs (FastAPI) and a TypeScript/Angular run-status experience with live progress and history cutting weeks of manual per-cluster work and enabling faster, repeatable upgrade and patch rollouts with a clearer audit trail.
- Served as on-call engineer for DOPS team managing 300+ CCS clusters, resolving tickets promptly and deploying preventive alerts that reduced repeat incidents while maintaining 99% SLA adherence.
- Used Grafana, Prometheus, and Thanos to analyze cluster resource utilization, driving judicious downscaling of underutilized clusters and cutting infrastructure costs by 70%.
- Designed a solution to minimize cross-AZ traffic in Helios EKS clusters by analyzing VPC flow logs and identifying inter-AZ communication inefficiencies. Proposed topology-aware routing strategies and workload placement optimizations to reduce AWS cross-AZ transfer costs.

Software Engineer

Aug 2021 – November 2024

Netradyne Inc

Bangalore, India

- Led the design and development of Stitch/Multi-View video feature from scratch, with the goal of automating the process of stitching annotated videos of 9 different camera angles from the IDMS SaaS portal, achieving 10x more sales than competitors using Java Spring, J2EE, Python, FFmpeg, PostgreSQL, Docker, Jenkins, AWS SQS, AWS EC2.
- Served as Subject Matter Expert for resolving video data loss and latency issues for Amazon NA and Amazon UK clients. Collaborated with device, ingestion, and analytics teams to debug and redesign optimized workflows, preventing over 700 important alert videos per day from being lost and increasing overall video availability from 91% to 99% (Shell scripting, C++).
- Designed and engineered custom subtitles for videos working with analytics verticals and frontend to generate VTT subtitle files across video players, achieving 100% annotated video coverage.
- Led migration of IDMS services to Amazon EKS, implementing containerized deployments using Kubernetes. Set up EKS clusters, configured node groups, and deployed applications using YAML-based declarative syntax.

PUBLICATIONS

Dermoscopic Classification using Image Processing and CNN

- Developed an automated melanoma detection model using SE-ResNeXt, a variant of ResNet with squeeze-and-excitation blocks, achieving 90% accuracy on the ISIC 2020 Challenge Dataset.

VPN Detection and Blocking

- Designed a VPN detector to reduce the vulnerability of small-scale vendor websites to unethical activities by detecting VPN connections and blocking access. (Python, Django, IPQualityScore)

TECHNICAL SKILLS

Backend: Python, Java, C++, C, C#, Go, JUnit, Grafana, Node.js, Linux, Unix

Frontend: JavaScript, React.js, Angular, TypeScript

DevOps & Cloud: Docker, Kubernetes, AWS (SSM, SQS, EC2, EKS, IAM/STS), Azure, Jenkins, Ansible, Datadog, Temporal, n8n, OpenTelemetry, Prometheus

Databases: MySQL, MongoDB, PostgreSQL

Frameworks & APIs: FastAPI, Spring Boot, J2EE, REST APIs

Other: System Design, Distributed Systems, Durable Workflows, Git/GitHub, Agile/SDLC

AWARDS

Netradyne Dream Team Award

- Recipient of the Annual Innovation Award, recognizing exceptional contributions and innovative spirit across the entire year.
